

Release 2.10.1 • For Cynthia Hodnett • From James Hodnett

Printable. Catalog-honest. Not a contract. Not signed L1. Not LIVE_PIN_OK.

Confidential • For Cynthia Hodnett • From James Hodnett, sole owner of AINav, Inc. • Release 2.10.1 • Not a contract • Not signed L1 • Not LIVE_PIN_OK • Invited, not recorded

This letter is for you, not for a customer and not for GitHub. James Hodnett asked that it be written from the company's own catalog so nothing here is invented: no email for you, no stock, no officer title, no named buyer, no claim that the public site has launched. If a sentence would make the company look further along than it is, it was left out.

The ask, in one sentence

James Hodnett is building a company that will not let a privileged money-movement write land unless two distinct humans admit the exact same action. He can write that gate. He cannot be both humans. We are asking you, Cynthia Hodnett, to be the second human ? seat B ? with your own business email and your own click. Not stock. Not Global Admin. Not this Cloud Agent. Not a rubber stamp.

The incident the company exists to stop

Picture a Dynamics 365 Business Central general journal. A line posts. Cash, accrual, or a clearing account moves. Two people did not look at the same action and say yes. That is the unauthorized general-journal post that two humans did not admit. Controllers already have a name for the human rule: segregation of duties. What they do not have is a gate that sits in front of the write itself.

The product is that gate. Two distinct people. One exact action, hashed so the memo cannot be swapped after you look. The grant is consumed once ? a replay is a refusal. The effect is fail-closed: if either person is missing, or the apply fails, the write does not land and there is no fake success. We call this Job C: dual-admitted effect authority before a privileged system-of-record write. We do not inventory agents (Job A). We do not replace Microsoft Entra (Job B).

Microsoft hosts, identifies, notifies, and receives the write after the two of you admit it. Microsoft is not the product. Teams is not a seat. A chat is not dual admit. Copilot is not the admit plane. A PIM activation is not dual admit. This Cloud Agent (cursor.cloud_agent) can operate the host. It cannot be seat A or seat B. Owner plus agent is still one human.

What we are building together

AINav, Inc. is a Delaware C corporation. James Hodnett is the sole owner. The product is the AINav Control Plane. AINAV.Institute is the public law of that plane ? hosted on Azure, not launched, not bound to ainav.institute until James says launch in his own words. Master mothership issues the lockfile and never writes a client system of record. Cloud and local motherships share one consume ledger. Azure, Microsoft 365 E7, Business Central Premium, Sales Enterprise, and Teams Premium are the fabric. They receive the write after you and James admit it.

We sell three things only. Packs, hours, and Microsoft licenses are not products. A controller buys the commercial close: named dual seats ×proof day ×signed L1 ×P-ADM attach. The lab pin LIVE_PIN_OK is a separate engineering fact and is never marked from a sale. Signed L1 is a counsel pack. It is still open.

The three SKUs ? catalog list, not recognized revenue

SKU | What the buyer is buying | List

L1 ? prove | Two to four weeks. Prove the unauthorized journal cannot land without two seats. Ninety-minute proof day. Acceptance Kit on the twin. | \$28,000?\$40,000

P-ADM ? keep | Keep the same admit plane covered after kit PASS. Never bundles free U-DUAL. | \$40,000?\$60,000 / year

U-DUAL ? deepen | Same plane, onto Sales (quote / order). Never free with P-ADM. | \$20,000?\$35,000 / year

If one controller bought all three in year one, the catalog list is \$88,000?\$135,000.

There is no named customer. There is no recognized revenue. Pipeline attached is zero.

That honesty is the company, not a placeholder.

Where we actually are

The admit plane runs in code. Gold tests pass. There is a real Business Central Sandbox company named AINav and a sandbox journal AINAV-L1 dated 28 August 2026 for \$250.00. Those seats were lab operator identities ? not two named treasury humans. Production is blocked. The Institute has an Azure hostname. The custom domain still serves a Coming Soon page. Microsoft for Startups and NVIDIA Inception are qualification targets. Membership is not claimed. Crypto-associated is false. We do not lead with custody or GPU production.

Honest split ? working versus not claimed

Working now | Not claimed, not asked of you today

Job C admit plane in code; sandbox journal on Business Central; Azure-hosted Institute held until launch | Signed L1; P-ADM attached; Business Central Production; live Sales / Dataverse; ainav.institute launched

You are invited by name as seat B / business executive | You as a recorded officer, stockholder, or second unique human in the catalog

Commercial equation written: named dual seats ×proof day ×signed L1 ×P-ADM attach | LIVE_PIN_OK; product high availability; counsel-signed MSA; recognized revenue

Why we need you ? not a second license

James Hodnett is one human principal. Job C is a two-human fact. A second Microsoft 365 license, a second tool, a second agent, or James clicking twice does not create dual admit. The second person must be a different human, with a different Entra object id, who actually reads the action and clicks. That is why this is a letter to you and not a settings change.

You are the person James trusts with treasury judgment. The seat opposite treasury_approver is treasury_controller ? the controller who will not let a journal land because it was convenient. NVIDIA Inception also requires two unique contacts with business emails: a developer (James) and a business executive (you, if you agree). Aliases and Gmail are refused. Sole owner does not collapse those two contacts. You are not recorded as an officer. You are not a stockholder. No email is stored until you agree and James says record it.

Without a second distinct person who actually clicks, AINav can keep a lab. It cannot sign L1. It cannot apply to Inception. It cannot look a controller in the eye and say two humans admitted the journal. That is the whole reason this brief exists. Your yes or no is the first commercial gate. Everything else on James's owner list waits behind it.

Your role if you agree ? what a Tuesday looks like

Two humans, two jobs, one write

| James Hodnett | Cynthia Hodnett (if you agree)

Seat | A | B

Treasury | treasury_approver | treasury_controller

Inception | developer / programmer | business executive

Identity | His Entra user | Your own @ainav.institute mailbox ? not an alias, not Gmail, not his login

Click | Admits the same action hash | Admits or refuses the same action hash

When a privileged write is proposed, you see the account, the amount, the memo, and the action hash. You admit or you refuse. Refusing is the product working. If James clicks both seats, it is not dual. If you approve without reading, it is not dual.

Proof day is ninety minutes on the sandbox twin with two named humans. It is still not Production. After a customer buys L1, you are one of the two seats the Acceptance Kit requires.

You do not need, and this brief does not give you

? Global Admin, Azure ownership, or a programming role

? Equity or an officer title ? counsel decides stock later; this page does not issue shares

? To become Copilot, Teams, Agent 365, or this Cloud Agent

? To buy a customer, launch ainav.institute, enable Production, mark LIVE_PIN_OK, or sign an MSA today

What your yes unlocks ? and what it does not

Your yes lets James create your mailbox, lets you sign in once, and lets proof day use two named humans instead of lab operator ids. It lets Inception have a business executive contact when ? and only when ? James also has a custom domain, an incorporation date outside this tree, and says the public site may launch. It does not make the company live. It does not attach P-ADM. It does not write Production. It does not make you a stockholder. It does not publish AINAV.Institute.

Your no, or not yet, is also a complete answer. Nothing is recorded. The invite stays open. The company stays a one-human lab until a second distinct human actually clicks. James will not invent a contact to paper over that.

What happens next

Five steps, in order. Stop after step 1 until you have decided.

? You decide ? yes, no, or not yet.

? If yes, James creates your @ainav.institute mailbox. You sign in once. He does not click seat B.

? He sends this agent your business email and says record it. Until those words, no email is stored.

? Proof day uses two named humans on the Business Central twin. Still not Production.

? Equity, officer titles, and Delaware filings stay with counsel. They are not required for this role.

Invited: Cynthia Hodnett • Recorded: no • Email: none stored • Equity: no • Second officer: none • Operator: cursor.cloud_agent (not a seat) • Commercial close: named dual seats ✕proof day ✕signed L1 ✕P-ADM attach
