

Release 2.30.0 • For Cynthia Hodnett • From James Hodnett

Printable. Catalog-honest. Not a contract. Not signed L1. Not LIVE_PIN_OK.

Confidential • For Cynthia Hodnett • From James Hodnett, sole owner of AINav, Inc. •
Release 2.30.0 • Not a contract • Not signed L1 • Not LIVE_PIN_OK • Invited, not
recorded

This letter is for you, not for a customer and not for GitHub. James Hodnett asked that it be written from the company's own catalog so nothing here is invented: no email for you, no stock, no officer title, no named buyer, no claim that the public site has launched. If a sentence would make the company look further along than it is, it was left out.

Why a client must have this

The write that must not happen

The unauthorized general-journal post the client's AI or the client's customer AI drafted and two humans did not admit. Every new client AI is another such surface. L1 is the week you prove one human plane sits over all of them: no admit, no write. The client institutes AINav as the failsafe, not as the AI.

Every new client AI is another unauthorized-write surface unless one human plane sits over all of them. Mandated: false. Certified: false. Not a fourth SKU. Job C is two humans before the write.

Controllers already have Business Central Premium, Entra, and two-person journal SOD. They do not have a gate in front of the write. A Teams vote, a PIM activation, or Copilot asking a human is not dual admit.

Owner, board, examiner ? same plane, three reasons

Owner: The controller who cannot let any AI post a journal without two seats, and who must be able to freeze writes without turning the business off. Board: Fiduciary oversight of material AI write risk. Inventory of models is not a control. One admit plane plus second-record keep is. Examiner: First record is the SoR write. Second record is who admitted it. Off-switch evidence is that the plane can freeze. Not a filing.

The sale is the ninety-minute proof day. Ninety minutes. Client AI or a customer AI may draft. Two existing treasury seats admit. One journal. First record on the twin. Second record is the sealed DecisionRecord. Walk out.

Investor packet ? print the letter with the full upsell catalog

The company in one line

Human control plane over every client AI that can draft a privileged system-of-record write. Job C: two distinct humans bind the same action_hash. No admit, no write. Print the letter packet: docs/CYNTHIA_HODNETT_INVESTOR.pdf. Not a priced round. Not a forecast. Not a contract. Not LIVE_PIN_OK.

Scoreboard today ? catalog-honest

Recognized revenue | Named customers | Signed L1 | Year-one if all three

\$0 | 0 | 0 | \$88,000? \$135,000 catalog list, not booked

Business model: prove with L1 (\$28?40k / 2?4 weeks), keep with P-ADM (\$40?60k / year after kit PASS), deepen with paid U-DUAL (\$20?35k / year, never free). Fee-for-service is \$3,500/day on the same plane after L1. Packs are not SKUs. The commercial close is

named dual seats ×proof day ×signed L1 ×P-ADM attach. Insulation is independence × Job C lockfile ×fail-closed gold ×catalog law. The ask of you is seat B ? not stock, not Global Admin, not a priced round.

Why the ultimate control plane insulates

Last gate over every drafting AI ? not another model

Ultimate, here, means last authority ? not a claim that AINav owns every model. The client utilizes AI. The client's customers utilize AI. Every one of those systems can draft a privileged write. The product is the last human gate in front of that write: one admit plane, two distinct humans, fail-closed. That is the ultimate control plane. It is not another Copilot, Agentforce, Joule, or Now Assist. The vendor of the drafting AI is the worst failsafe for that AI. Microsoft sells Copilot and Agent 365. Salesforce sells Agentforce. ServiceNow sells Now Assist. SAP sells Joule. Each can ship a human-in-the-loop button over its own draft. A treasurer who lets the author of the draft also lock the vault has no independent control. Independence is why one plane can sit over all of them at once. A vendor-native button only covers that vendor. Copilot asking a human leaves Agentforce and the counterparty's model ungated. A Teams vote is not dual admit. PIM is not dual admit. Once the controller institutes one plane over the whole estate, replacing it with a Copilot feature is a downgrade: it opens every other AI again. The umbrella is the insulation. Point solutions are not the category. After kit PASS, the second record, the off switch, and the rollback are segregation of duties ? books-and-records, not a chatbot seat. Cancelling the plane is cancelling the gate. That switching cost is SOD, not contract fiction. Others can copy a two-person Business Central approval, a Teams vote, or Copilot asking a human. They do not copy Job C: lockfile stays job_c, consume-once grant bound to seats and action_hash, fail-closed effect, frozen gold, hash-chained DecisionRecords, catalog law that refuses competitor SKUs. This is not a patent. This is not uncopyable. G12 stays open.

How humans sit on the plane ? executive dashboard

Authorize, provision, keep ? honest tiles, not a certificate

Must-have for the named controller: every new client AI is another unauthorized-write surface unless one human plane sits over all of them. The unauthorized general-journal post the client's AI or the client's customer AI drafted and two humans did not admit. The client institutes AINav as the failsafe, not as the AI. Two humans before the write. The ultimate control plane interface is not a fourth product. It is how humans sit on the plane from the top of the client's existing org chart down to every drafting AI. Owner and board oversee. They institute the plane and can ask for a freeze. They are not seats. One title cannot click both admits. Treasury (seat A) and controller (seat B) are the only two humans who bind the action_hash. Payables and sales may draft. IT hosts Copilot and agents. Those AIs are not seats. Compliance and internal audit keep the second record. Legal is not replaced. Department AI is not a seat. Do not invent named heads. Hierarchical access is segregation of duties, not a new identity provider. Internal and remote use the same Entra object id on the same plane. Remote is not a second control plane and not a VPN SKU. Microsoft Conditional Access may identify the human. It does not admit the write. The Cloud Agent may operate the host. It is not a seat. The executive dashboard is that same plane, tiled. Real-time here means the admit ledger and the freeze state: pending binds, admits, refuses, frozen, last sealed keep. It does not invent a live P&L, forecast ARR, or Production Business Central metrics. Until signed L1, business tiles stay zero and the sandbox journal AINAV-L1 is labeled lab operator identities. AI compliance tiles map

NIST, SOX, EU AI Act, ISO 42001, books-and-records, and three lines of defense with claimed=false. The dashboard is not a certificate and not a SKU. The client executive dashboard is included with L1. It is not an upsell. There is one dashboard. Do not sell Standard Dashboard versus Advanced Dashboard. Advanced provision adds priced desks, P-ADM keep, paid U-DUAL, and hours ? not a second dashboard SKU. The floor is a command console on one plane. Hierarchical views are not a second product. Owner and board get freeze and the off switch. They are not seats. Seat A and seat B get the walkable rehearsal and refuse. The examiner gets the bind inspector, the first record, the second record, and the maps. Remote is the same Entra object id ? Conditional Access may identify; it does not admit. IT hosts Copilot and agents and can demonstrate that PIM, Teams, Copilot, and Agent Tools are not dual admit. The write path is the same for every privileged class: draft, bind an action_hash, seat A, seat B, first record on the SoR, second record as the sealed DecisionRecord, keep. The floor walks that path as a sandbox rehearsal of the public wedge bc.general_journal.post. Completing the rehearsal does not create a new SoR write. Microsoft is not called. Production stays 0. Second record stays 0. Keep stays none. Same-seat, agent-click, PIM, Copilot, and replay are deny paths. Freeze in the console is local to the browser. The catalog plane stays OPEN until an owner later marks a real freeze. The duty matrix is who may admit, freeze, keep, draft, host, or counsel. Only seat A and seat B admit. The attention board is pending 0, refused 0, frozen 0, production writes 0, second record 0, standing grants 0, provisioned SKUs 0/0/0, and one sandbox first record. The clock is catalog as-of. It is not a live Production clock. Off switch is fail-closed. Reset is the last sealed keep. Rollback is a compensating write that itself requires dual admit. Coverage is every action class on L1, P-ADM, and U-DUAL. None of those classes are live. Three lines of defense: 1LOD is dual admit, 2LOD is P-ADM keep, 3LOD is not claimed. Access authorization is zero-standing, not a ZTNA SKU. Microsoft Entra and Conditional Access may identify the human on every request. Identify is not admit. Network location, VPN, PIM, and a Teams presence are not trust. A view authorization lets a human see a console. A seat authorization lets a human bind. A grant is a single-use consume of one action_hash. Revocation is freeze, seat revoke, grant expire, SKU detach, or view revoke. There is no standing privilege on the write. Provisioning is two bands on the same plane, not two more SKUs. Standard provision is included seating with L1: the included L1 packs, lib.l1.wedge on bc.sandbox, Entra identity, Teams notify, the twin, proof day or Acceptance Kit, and the client executive dashboard. Standard is not an upsell product. Advanced provision is the upsell band: priced L1 desks, priced P-ADM keeps, paid U-DUAL, priced U-DUAL desks, and fee-for-service hours after L1. Advanced is not a SKU. U-DUAL is never free with P-ADM. Hours never attach U-DUAL. Attached today is 0 L1 / 0 P-ADM / 0 U-DUAL. Provisioning a SKU is not LIVE_PIN_OK. Inter-communication is notify. Teams Enterprise, Teams Premium, and mail may tell a human that a bind is waiting or a keep landed. A chat is not a seat. A mailbox is not the second record. Graph is not called from this floor. The keep is the sealed DecisionRecord, not the thread. Record keeping is two records and a keep. First record is the admitted SoR write. Second record is the sealed DecisionRecord after P-ADM. Keep is the weekly export after kit PASS. Retention is mapped to books-and-records and COSO. It is not a 17a-4 opinion and not a certificate. AI compliance and regulation compliance are the same maps with claimed=false.

Part I ? For Cynthia Hodnett

The ask, in one sentence

James Hodnett is building a company that will not let a privileged money-movement write land unless two distinct humans admit the exact same action. He can write that

gate. He cannot be both humans. We are asking you, Cynthia Hodnett, to be the second human ? seat B ? with your own business email and your own click. Not stock. Not Global Admin. Not this Cloud Agent. Not a rubber stamp.

The incident the company exists to stop

Picture a Dynamics 365 Business Central general journal. A line posts. Cash, accrual, or a clearing account moves. Two people did not look at the same action and say yes. That is the unauthorized general-journal post that two humans did not admit. Controllers already have a name for the human rule: segregation of duties. What they do not have is a gate that sits in front of the write itself.

The product is that gate. Two distinct people. One exact action, hashed so the memo cannot be swapped after you look. The grant is consumed once ? a replay is a refusal. The effect is fail-closed: if either person is missing, or the apply fails, the write does not land and there is no fake success. We call this Job C: dual-admitted effect authority before a privileged system-of-record write. We do not inventory agents (Job A). We do not replace Microsoft Entra (Job B).

Microsoft hosts, identifies, notifies, and receives the write after the two of you admit it. Microsoft is not the product. Teams is not a seat. A chat is not dual admit. Copilot is not the admit plane. A PIM activation is not dual admit. This Cloud Agent (cursor.cloud_agent) can operate the host. It cannot be seat A or seat B. Owner plus agent is still one human.

What we are building together

AINav, Inc. is a Delaware C corporation. James Hodnett is the sole owner. The product is the AINav Control Plane. AINAV.Institute is the public law of that plane ? hosted on Azure, not launched, not bound to ainav.institute until James says launch in his own words. Master mothership issues the lockfile and never writes a client system of record. Cloud and local motherships share one consume ledger. Azure, Microsoft 365 E7, Business Central Premium, Sales Enterprise, and Teams Premium are the fabric. They receive the write after you and James admit it.

The client utilizes AI. The client's customers utilize AI. Every one of those systems can draft a privileged write. Copilot, Agent 365, a BYO MCP, or a counterparty model may draft a journal. AINav is not that AI. It is the human control plane that sits over all of them: failsafe, off switch, reset, rollback. The client's two seats admit, then the write. No admit, no write. First record is the SoR write. Second record is the sealed DecisionRecord. Off switch is fail-closed, not powering down Copilot. Rollback is a compensating write, not a time machine. We map NIST, SOX, fiduciary oversight, books-and-records, the EU AI Act, and ISO 42001. We do not claim those certificates. We do not invent a board or a regulator. The plane sits on the client's existing org chart. Treasury and controller hold the two seats. Department AI is not a seat. We do not invent named department heads. Governance is not a fourth SKU. The plane stays independent of Microsoft and of the client's other AI vendors. A Teams vote or a Copilot prompt is not dual admit. This is not a patent. This is not uncopyable. G12 stays open.

We sell three things only. Packs, hours, and Microsoft licenses are not products. A controller buys the commercial close: named dual seats xproof day xsigned L1 xP-ADM attach. The lab pin LIVE_PIN_OK is a separate engineering fact and is never marked from a sale. Signed L1 is a counsel pack. It is still open.

The three SKUs ? catalog list, not recognized revenue

SKU | What the buyer is buying | List

L1 ? prove | Two to four weeks. Prove the unauthorized journal cannot land without two seats. Ninety-minute proof day. Acceptance Kit on the twin. | \$28,000?\$40,000

P-ADM ? keep | Keep the same admit plane covered after kit PASS. Never bundles free U-DUAL. | \$40,000?\$60,000 / year

U-DUAL ? deepen | Same plane, onto Sales (quote / order). Never free with P-ADM. | \$20,000?\$35,000 / year

If one controller bought all three in year one, the catalog list is \$88,000?\$135,000.

There is no named customer. There is no recognized revenue. Pipeline attached is zero.

That honesty is the company, not a placeholder.

Upsell catalog ? desks on the same three SKUs, not a fourth product

Desk | Requires | List

industry.treasury ? Treasury wedge | L1 | included with L1

industry.sales ? Sales deepen | U-DUAL | included with U-DUAL

industry.controller ? Controller desk | L1 | included with L1

industry.quote_desk ? Quote desk | U-DUAL | included with U-DUAL

industry.payables ? Payables desk | L1 | \$6,000?\$10,000

industry.bank ? Bank desk | L1 | \$6,000?\$10,000

industry.invoice_desk ? Invoice desk | U-DUAL | \$6,000?\$10,000

industry.credit ? Credit desk | U-DUAL | \$6,000?\$10,000

industry.cash ? Cash desk | L1 | \$6,000?\$10,000

industry.fixed_asset ? Fixed-asset desk | L1 | \$6,000?\$10,000

industry.inventory ? Inventory desk | L1 | \$6,000?\$10,000

industry.returns ? Returns desk | U-DUAL | \$6,000?\$10,000

industry.pricing ? Pricing desk | U-DUAL | \$6,000?\$10,000

industry.retention ? Retention keep | P-ADM | \$5,000?\$8,000

industry.governance ? AI failsafe desk | L1 | included with L1

industry.oversight ? Oversight keep | P-ADM | \$5,000?\$8,000

industry.cascade ? Counterparty AI desk | L1 | \$6,000?\$10,000

industry.second_record ? Second-record keep | P-ADM | \$5,000?\$8,000

industry.control_plane ? Human control plane | L1 | included with L1

industry.off_switch ? Off-switch desk | L1 | \$6,000?\$10,000

industry.rollback ? Rollback desk | L1 | \$6,000?\$10,000

industry.board ? Board / examiner keep | P-ADM | \$5,000?\$8,000

industry.org ? Client org seating | L1 | included with L1

industry.internal_audit ? Internal-audit keep | P-ADM | \$5,000?\$8,000

industry.independence ? Independent plane | L1 | included with L1

industry.ip_keep ? IP / reserved-work keep | P-ADM | \$5,000?\$8,000

Fee-for-service is \$3,500/day after L1: integration, replay, QBR, mothership ops, desk

workshop, keep wiring, governance workshop, institute failsafe, board briefing,

org-chart workshop, IP hygiene. Hours never mint a SKU and never attach U-DUAL. Print

the full packet: docs/CYNTHIA_HODNETT_INVESTOR.pdf.

Where we actually are

The admit plane runs in code. Gold tests pass. There is a real Business Central Sandbox company named AINav and a sandbox journal AINAV-L1 dated 28 August 2026 for \$250.00. Those seats were lab operator identities ? not two named treasury humans.

Production is blocked. The Institute has an Azure hostname. The custom domain still serves a Coming Soon page. Microsoft for Startups and NVIDIA Inception are qualification targets. Membership is not claimed. Crypto-associated is false. We do

not lead with custody or GPU production.

Honest split ? working versus not claimed

Working now | Not claimed, not asked of you today

Job C admit plane in code; sandbox journal on Business Central; Azure-hosted Institute held until launch | Signed L1; P-ADM attached; Business Central Production; live Sales / Dataverse; ainav.institute launched

You are invited by name as seat B / business executive | You as a recorded officer, stockholder, or second unique human in the catalog

Commercial equation written: named dual seats ×proof day ×signed L1 ×P-ADM attach | LIVE_PIN_OK; product high availability; counsel-signed MSA; recognized revenue

Why we need you ? not a second license

James Hodnett is one human principal. Job C is a two-human fact. A second Microsoft 365 license, a second tool, a second agent, or James clicking twice does not create dual admit. The second person must be a different human, with a different Entra object id, who actually reads the action and clicks. That is why this is a letter to you and not a settings change.

You are the person James trusts with treasury judgment. The seat opposite treasury_approver is treasury_controller ? the controller who will not let a journal land because it was convenient. NVIDIA Inception also requires two unique contacts with business emails: a developer (James) and a business executive (you, if you agree). Aliases and Gmail are refused. Sole owner does not collapse those two contacts. You are not recorded as an officer. You are not a stockholder. No email is stored until you agree and James says record it.

Without a second distinct person who actually clicks, AINav can keep a lab. It cannot sign L1. It cannot apply to Inception. It cannot look a controller in the eye and say two humans admitted the journal. That is the whole reason this brief exists. Your yes or no is the first commercial gate. Everything else on James's owner list waits behind it.

Your role if you agree ? what a Tuesday looks like

Two humans, two jobs, one write

| James Hodnett | Cynthia Hodnett (if you agree)

Seat | A | B

Treasury | treasury_approver | treasury_controller

Inception | developer / programmer | business executive

Identity | His Entra user | Your own @ainav.institute mailbox ? not an alias, not Gmail, not his login

Click | Admits the same action hash | Admits or refuses the same action hash

When a privileged write is proposed, you see the account, the amount, the memo, and the action hash. You admit or you refuse. Refusing is the product working. If James clicks both seats, it is not dual. If you approve without reading, it is not dual.

Proof day is ninety minutes on the sandbox twin with two named humans. It is still not Production. After a customer buys L1, you are one of the two seats the Acceptance Kit requires.

You do not need, and this brief does not give you

? Global Admin, Azure ownership, or a programming role

? Equity or an officer title ? counsel decides stock later; this page does not issue shares

? To become Copilot, Teams, Agent 365, or this Cloud Agent

? To buy a customer, launch ainav.institute, enable Production, mark LIVE_PIN_OK, or sign an MSA today

What your yes unlocks ? and what it does not

Your yes lets James create your mailbox, lets you sign in once, and lets proof day use two named humans instead of lab operator ids. It lets Inception have a business executive contact when ? and only when ? James also has a custom domain, an incorporation date outside this tree, and says the public site may launch. It does not make the company live. It does not attach P-ADM. It does not write Production. It does not make you a stockholder. It does not publish AINAV.Institute.

Your no, or not yet, is also a complete answer. Nothing is recorded. The invite stays open. The company stays a one-human lab until a second distinct human actually clicks. James will not invent a contact to paper over that.

Part II ? Foundational buildout

Three motherships, one law. Master mothership (Azure-declared, AINav) issues the lockfile, catalog, and gold. It never writes a client system of record. Cloud mothership (Azure-declared client plane) and local mothership (client plane) share one consume ledger and run AdmitClient against a Business Central digital twin. They are not two products. They are not two deployed production planes. Today they are in-process on that shared ledger. Week one: provision master lockfile ? provision the cloud + local pair ? proof day or Acceptance Kit on the BC twin ? notify Teams ? store kit evidence in SharePoint sandbox ? refuse the live pin.

Week-one prove is L1 + industry.treasury + lib.l1.wedge on bc.sandbox, Entra identity, and Teams notify. That is provisioning.standard_l1. It is not the whole commercial standard band. Standard seating included with L1 is every L1 pack and library with included_in_sku=true, plus the client executive dashboard. The dashboard is that same plane, tiled. It is not an upsell and not a SKU. There is one dashboard. Do not sell Standard Dashboard versus Advanced Dashboard. Standard pair adds cloud and local hosts on one ledger. Industry packs seat the same admit plane: treasury and controller on the journal wedge; payables, bank, cash, fixed-asset, and inventory as priced L1 desks; sales and quote desk included with paid U-DUAL ? not free, not included with L1; invoice, credit, returns, and pricing as priced U-DUAL desks; retention as a priced P-ADM keep; governance seating included with L1; oversight keep as a priced P-ADM desk. Advanced provision is the upsell band ? still not a SKU: priced desks, P-ADM keep, paid U-DUAL, and fee-for-service hours after L1. included means included with the required SKU when that SKU is attached. U-DUAL is never free. Hours never attach U-DUAL. Libraries bundle those modules. Repositories hold the plane, catalog, Institute, finance, brief, review, packs, runbooks, owner steps, counsel, and governance. None of those are SKUs. A la carte is a desk attach on L1, P-ADM, or paid U-DUAL ? never a fourth product.

Microsoft fabric, 10/10 and no further: Azure host (eastus; Institute eastus2; West Europe blocked by policy). Microsoft 365 E7 / Entra for seat object ids. Business Central Premium for L1 SoR. Sales Enterprise for U-DUAL SoR. Teams Enterprise and Premium for notify. Complements: Key Vault, Monitor, SharePoint kit evidence, Defender XDR, Entra PIM, Sentinel (the mothership LAW is not a Sentinel workspace), Azure Policy. Copilot, Agent 365, and Agent Tools ship inside E7. They are not the admit plane. A 10/10 Microsoft estate that votes in Teams or lets Copilot post the journal is a failure of Job C, not a feature.

Part III ? Organization and operations

Ten departments. The map is complete out of the gate. That does not mean Sales, Teams, Institute, legal, or programs are live. BD and sales are the same motion: qualify an ICP controller who already has Business Central Premium, Entra, and two-person journal SOD ? generate a proof-day brief they can forward ? ninety minutes ? sell L1 that week ? kit PASS ? attach P-ADM ? offer paid U-DUAL. Exits: LOST, KIT_FAIL, CHURN. Do not invent a contact inbox or a design-partner name.

Operating company ? departments are not SKUs

Department | Role | Status | Blocked by

Treasury / Finance | books | running_sandbox | BC Production app not Enabled; signed L1 / two named treasury humans

Identity / IT / Host | identity_host | running_sandbox | LIVE_PIN_OK

Sales / Revenue | pipeline | licensed_not_wired | Power Platform environment with Dataverse; DATAVERSE_URL

People / Notify | notify | licensed_not_wired | Team.ReadBasic.All on the same Entra app

Security / Compliance | audit_sink | licensed_not_wired | SecurityIncident.Read.All; RoleEligibilitySchedule.Read.Directory; Sites.Read.All; Sentinel on the existing LAW

Institute / GTM | public | azure_hosted_not_custom | ainav.institute custom domain

Legal / Counsel | counsel | open_gap | G12 legal; G13 signed L1

Product / Engineering | plane | running_code | product HA

Delivery / Customer Success | pair | running_code | named customer; LIVE_PIN_OK

Programs / Partnerships | qualify | qualify_not_claimed | public website; incorporation date; second unique human contact

Part IV ? What we sell, pricing, financial model

Three SKUs. Five pricing models. Fee-for-service at \$3,500/day on the same plane after L1. Hours never mint a SKU and never attach U-DUAL. There is no billing provider. Recognized revenue is 0. Signed L1 is 0. Named customers are 0. The numbers below are if-then catalog list. They are not a forecast, not ARR, and not booked.

Pricing models

Item | Model | How it is sold

L1 | Fixed-scope project | 2?4 week engagement. Priced against the unauthorized journal, not hours.

P-ADM | Annual keep | Attaches only after L1 Acceptance Kit PASS. Never bundles free U-DUAL.

U-DUAL | Annual deepen | Same admit plane onto Sales. Never free with P-ADM or U-SOR.

FFS | Day rate \$3,500 | Integration, replay, QBR, mothership ops, desk workshop, keep wiring. Requires L1. Not a SKU.

Pack attach | Annual desk | Priced L1 / U-DUAL / P-ADM desks. Not a fourth SKU. Never attaches U-DUAL.

If-then catalog list ? zero customers today

Scenario | If | List

One controller ? L1 only | One controller buys L1 and stops. | \$28,000?\$40,000

One controller ? L1 then P-ADM | One controller buys L1, kit PASS, then attaches P-ADM. | \$68,000?\$100,000

One controller ? all three SKUs | One controller buys L1, attaches P-ADM, then pays

for U-DUAL. | \$88,000?\$135,000

Three controllers ? L1 + P-ADM each | Three controllers each buy L1 and attach P-ADM.

No named buyers exist. | \$204,000?\$300,000

One L1 plus four FFS days | One controller buys L1 and four billable days on the same plane. | \$42,000?\$54,000

One L1 plus counterparty AI desk | One controller buys L1 then attaches industry.cascade for their customers' AI. | \$34,000?\$50,000

One controller ? L1, P-ADM, second-record keep | One controller buys L1, attaches P-ADM, then attaches industry.second_record. | \$73,000?\$108,000

One L1 plus off-switch desk | One controller buys L1 then attaches industry.off_switch so humans can freeze writes. | \$34,000?\$50,000

One controller ? L1, P-ADM, board keep | One controller buys L1, attaches P-ADM, then attaches industry.board for owner/board/examiner evidence. | \$73,000?\$108,000

One controller ? L1, P-ADM, internal-audit keep | One controller buys L1, attaches P-ADM, then attaches industry.internal_audit for the seating map. | \$73,000?\$108,000

One controller ? L1, P-ADM, IP keep | One controller buys L1, attaches P-ADM, then attaches industry.ip_keep for reserved-work notice. | \$73,000?\$108,000

One L1 plus payables and bank desks | One controller buys L1 then attaches industry.payables and industry.bank. | \$40,000?\$60,000

One controller ? L1, P-ADM, oversight keep | One controller buys L1, attaches P-ADM, then attaches industry.oversight. | \$73,000?\$108,000

All three SKUs plus invoice and credit desks | One controller buys all three SKUs then attaches industry.invoice_desk and industry.credit. | \$100,000?\$155,000

Part V ? Expert review: what works, what to improve, 15 upgrades

Read as a coding first-principles review, a Microsoft-fabric review, and a business review. The bar is gold-standard Job C, not a prettier Coming Soon page. Apple polish without the gate is decoration. Elon-style first principles without two humans is a lab.

Working well

? Job C invariants hold in gold: dual seats, single-use consume, fail-closed effect, hash-chained DecisionRecords.

? Three SKUs only. Packs, libraries, FFS, and Microsoft licenses are not products.

? Catalog is law. Probe cannot publish, write a SoR, or mark LIVE_PIN_OK.

? AINAV.Institute is hosted and launch is held. Coming Soon is not claimed as the custom domain.

? Microsoft fabric path is correct: Azure hosts, Entra identifies, AINav admits, BC/Sales receive, Teams notifies.

? Business Central Sandbox journal AINAV-L1 exists. Production stays blocked.

? Cynthia Hodnett is invited by name and not recorded. The Cloud Agent is not a seat.

? Proof day is an executable ninety-minute runbook. Buyer brief does not invent an inbox.

? A la carte desks are pack-gated. Extra Business Central and Sales writes stay off the wedge until attach.

? AINav is encoded as a separate failsafe from client AI. Maps name NIST, SOX, EU AI Act, and ISO 42001 without claiming certification.

? Control equation is explicit: the client utilizes AI, AINav is the failsafe, two humans control the write.

? The client's customers utilize AI. The client institutes AINav and the stable of

offerings as the failsafe. First record is the SoR write; second record is the DecisionRecord.

? The client executive dashboard is included with L1. Standard provision is included seating. Advanced provision is the upsell band. None of those are SKUs.

Could be improved ? without inventing a fourth SKU

? AINAV-L1 used lab operator oids. That is a sandbox write, not two named treasury humans.

? One human cannot close dual admit, Inception contacts, or signed L1.

? Sales Enterprise is licensed with zero Dataverse instances. U-DUAL cannot leave the twin.

? Cloud and local motherships are Azure-declared in catalog and still in-process on one ledger ? not two deployed planes.

? Apex ainav.institute is Squarespace Coming Soon while Azure hosts the real site. The public face is split.

? Graph read roles are missing. Teams, SharePoint, Defender, and PIM complements stay 403.

? No billing provider. Catalog list cannot become recognized revenue.

? Ten departments are mapped. Most are licensed_not_wired. The map is not the company running.

? Governance is a catalog map. It is not counsel, not a filing, and not a certificate.

Fifteen specific upgrades. Tree = already encoded. Owner = James must click.

? 1. [owner] Named dual seats ? Ask Cynthia. Create her @ainav.institute user. She clicks seat B. James does not click both.

? 2. [owner] Proof day on named humans ? Run python -m ainav proof-day with two distinct Entra object ids. Stop telling the AINAV-L1 lab-oid story as the sale.

? 3. [owner] Graph read on the same app ? Admin-consent Team.ReadBasic.All, Sites.Read.All, SecurityIncident.Read.All, RoleEligibilitySchedule.Read.Directory. No Write. No new app.

? 4. [owner] US Dataverse ? Create a US Power Platform environment with Dataverse. New Cloud Agent with DATAVERSE_URL. Unblocks the Sales twin, not live SoR.

? 5. [tree] One door, no inbox ? Keep the Institute buyer page as a forwardable proof-day brief. Do not invent a contact inbox or a design-partner name.

? 6. [tree] Price the incident, not hours ? Sell L1 against the unauthorized journal. FFS days deepen the same plane and never mint a SKU.

? 7. [tree] Hold launch ? Do not bind ainav.institute or publish until James says launch. --publish-institute stays launch_not_ready.

? 8. [owner] Startups then Inception ? Apply to Microsoft for Startups only after launch and the custom domain. Inception second. Membership is not claimed.

? 9. [tree] P-ADM weekly keep object ? Weekly sealed DecisionRecord export the treasurer can open. Not live Purview.

? 10. [tree] FFS requires L1 ? Billable days refuse without L1. They cannot attach U-DUAL.

? 11. [tree] Catalog financial model ? Talk if-then catalog list. Never invent ARR, bookings, or recognized revenue.

? 12. [tree] Commercial equation ? lab pin ? Controllers buy named dual seats xproof day xsigned L1 xP-ADM attach. LIVE_PIN_OK stays a lab pin.

? 13. [owner] Counsel pack ? G12 hygiene then G13 signed L1. Unsigned order form and MSA skeleton are not a signature.

? 14. [tree] Product HA is not a sale ? Redis multi-host and LIVE_PIN_OK stay engineering. Do not mark them from a contract.

? 15. [owner] Leave Available / Block Dataverse MCP ? Leave five Microsoft tools Available. Block Dataverse MCP until paid U-DUAL. Tools are not seats.

What happens next

Five steps, in order. Stop after step 1 until Cynthia has decided.

? Cynthia decides ? yes, no, or not yet.

? If yes, James creates her @ainav.institute mailbox. She signs in once. He does not click seat B.

? He sends this agent her business email and says record it. Until those words, no email is stored.

? Proof day uses two named humans on the Business Central twin. Still not Production.

? Equity, officer titles, and Delaware filings stay with counsel. They are not required for this role.

Invited: Cynthia Hodnett • Recorded: no • Email: none stored • Equity: no • Second officer: none • Operator: cursor.cloud_agent (not a seat) • Commercial close: named dual seats ✕proof day ✕signed L1 ✕P-ADM attach • Recognized revenue: 0
