

A letter to Cynthia Hodnett

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

Human control plane over every client AI that can draft a privileged system-of-record write.

EXECUTIVE SUMMARY

This is the board packet for the admit plane. Job C needs a second human. The sale is the ninety-minute proof. Three SKUs only. Honest tiles stay zero until a controller buys.

Job C ? Two distinct humans bind the same action_hash before a privileged SoR write. Fail-closed. Consume-once. The Cloud Agent is not a seat.

Proof day ? Ninety minutes. Client AI or a customer AI may draft. Two existing treasury seats admit. One journal. First record on the twin. Second record is the sealed DecisionRecord. Walk out.

Three SKUs ? L1 \$28,000?\$40,000 in two to four weeks. P-ADM \$40,000?\$60,000 / year after kit PASS. U-DUAL \$20,000?\$35,000 / year, never free. Year-one if all three: \$88,000?\$135,000 list, not booked. Packs are not SKUs.

Scoreboard today ? Recognized revenue \$0. Named customers 0. Signed L1 0. First record 1 sandbox / 0 production. Second record 0. Off switch READY. Seats 1 mailbox recorded / 0 oid. Cynthia agreed as seat B. Entra oid and click still open.

Microsoft ? Microsoft is identity, notify, SoR, and host. Microsoft is not the product. A Teams vote, a PIM activation, or Copilot asking a human is not dual admit.

Must-have ? Must-have is not mandated by the SEC. Certified is false. Governance is a catalog map. It is not counsel, not a filing, and not a certificate. G12 stays open. This is not a patent.

Owner-only still open ? Named dual seats. Graph Writes revoke. US Dataverse. Institute launch. Production BC only if explicitly authorized. LIVE_PIN_OK cannot be marked from this plane.

The ask ? Cynthia Hodnett as seat B. Mailbox chodnett@ainav.institute recorded. Entra oid and click still open. Not stock. Not Global Admin. Not a priced round. Not LIVE_PIN_OK.

A LETTER TO CYNTHIA HODNETT

Dear Cynthia ? I am writing to record that you agreed to be the second human on the admit plane. James recorded chodnett@ainav.institute. I can write the gate that will not let a privileged money-movement write land unless two distinct humans admit the exact same action. I cannot be both humans. A mailbox is not your click.

I am asking you because I trust your treasury judgment, and because you already sit next to this company as family. You agreed. Seat B is the second unique human. Mailbox recorded: chodnett@ainav.institute. That mailbox is not an Entra object id and not your click. It is not stock, not a priced round, and not a customer seat.

You were invited. The mailbox is now recorded. I will not invent an object id for you. Your no, or not yet, on the click is still a complete answer.

I want you as number two for other aspects, not all aspects. That is not an officer title and not a click. I remain sole owner. You manage the write and the walk-away. You do not hold the keys, the pin, or both seats.

You become seat B on the same Entra tenant when you have your own object id and your own click. I remain seat A. The Cloud Agent is never a seat. On a Tuesday you see the same action I see. You admit or you refuse. Refusing is the product working.

I will not ask you for a priced round, a valuation, or to mark LIVE_PIN_OK. This is not a priced round. Recognized revenue is \$0. That honesty is the company, not a placeholder.

James Hodnett, sole owner of AINav, Inc.

The company

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

YOUR DECISION

Seat B is treasury_controller. Mailbox recorded: chodnett@ainav.institute. Entra object id is not recorded. Seat B click is not recorded. James cannot click for you. Refusing a write is the product working. You are number two for other aspects, not all aspects. You are not a stockholder and not an officer.

Seat A is treasury_approver (James). Seat B is treasury_controller (you). Each needs a distinct Entra object id. When a privileged write is proposed, both of you see the same action_hash. Admit or refuse. Refusing is the product working. James clicking twice is not dual. The Cloud Agent is not a seat. A mailbox is not the click.

WHAT WE WILL NOT ASK

I will not ask you for stock, Global Admin, a priced round, a valuation, or to mark LIVE_PIN_OK. I will not invent an email, an officer title, or a second unique human in the catalog. You are not a rubber stamp. The Cloud Agent is not your stand-in.

Close = named dual seats ×proof day ×signed L1 ×P-ADM attach. Insulation = independence ×Job C lockfile ×fail-closed gold ×catalog law. Packet = catalog list ×zero booked ×two-human close.

RECOGNIZED REVENUE	NAMED CUSTOMERS	SIGNED L1	YEAR-ONE IF ALL THREE
\$0	0	0	\$88,000?\$135,000

THE COMPANY

AINav, Inc. is a Delaware C corporation. James Hodnett is the sole owner. The product is the AINav Control Plane. AINAV.Institute is hosted on Azure and is not launched. Job C only: two distinct humans bind the same action_hash before a privileged write. Microsoft is identity, notify, SoR, and host. Microsoft is not the product. The Cloud Agent operates the host. It is not a seat.

THE PROBLEM

A Dynamics 365 Business Central journal can post because a client Copilot, Agent 365, a bring-your-own model, or a customer’s AI drafted the line. Controllers already have segregation of duties. They do not have a gate in front of the write. A Teams vote, a PIM activation, or Copilot asking a human is not dual admit. James clicking twice is not dual admit.

THE PRODUCT

Job C is that gate. Two distinct humans bind the same action_hash. The grant is consumed once ? a replay is a refusal. The effect is fail-closed: if either person is missing, or the apply fails, the write does not land and there is no fake success. AINav is not the client’s AI. It is the independent human failsafe and control plane: off switch, reset, rollback, first record (the admitted SoR write) and second record (the sealed DecisionRecord).

WHY THE ULTIMATE CONTROL PLANE INSULATES

Ultimate, here, means last authority ? not a claim that AINav owns every model. The client utilizes AI. The client’s customers utilize AI. Every one of those systems can draft a privileged write. The product is the last human gate in front of that write: one admit plane, two distinct humans, fail-closed. That is the ultimate control plane. It is not another Copilot, Agentforce, Joule, or Now Assist.

Investor packet

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

The vendor of the drafting AI is the worst failsafe for that AI. Microsoft sells Copilot and Agent 365. Salesforce sells Agentforce. ServiceNow sells Now Assist. SAP sells Joule. Each can ship a human-in-the-loop button over its own draft. A treasurer who lets the author of the draft also lock the vault has no independent control. Independence is why one plane can sit over all of them at once.

A vendor-native button only covers that vendor. Copilot asking a human leaves Agentforce and the counterparty's model ungated. A Teams vote is not dual admit. PIM is not dual admit. Once the controller institutes one plane over the whole estate, replacing it with a Copilot feature is a downgrade: it opens every other AI again. The umbrella is the insulation. Point solutions are not the category.

After kit PASS, the second record, the off switch, and the rollback are segregation of duties ? books-and-records, not a chatbot seat. Cancelling the plane is cancelling the gate. That switching cost is SOD, not contract fiction.

Others can copy a two-person Business Central approval, a Teams vote, or Copilot asking a human. They do not copy Job C: lockfile stays job_c, consume-once grant bound to seats and action_hash, fail-closed effect, frozen gold, hash-chained DecisionRecords, catalog law that refuses competitor SKUs. This is not a patent. This is not uncopyable. G12 stays open.

HOW HUMANS SIT ON THE PLANE

Must-have for the named controller: every new client AI is another unauthorized-write surface unless one human plane sits over all of them. The unauthorized general-journal post the client's AI or the client's customer AI drafted and two humans did not admit. The client institutes AINav as the failsafe, not as the AI. Two humans before the write.

The ultimate control plane interface is not a fourth product. It is how humans sit on the plane from the top of the client's existing org chart down to every drafting AI.

Owner and board oversee. They institute the plane and can ask for a freeze. They are not seats. One title cannot click both admits. Treasury (seat A) and controller (seat B) are the only two humans who bind the action_hash. Payables and sales may draft. IT hosts Copilot and agents. Those AIs are not seats. Compliance and internal audit keep the second record. Legal is not replaced. Department AI is not a seat. Do not invent named heads.

Hierarchical access is segregation of duties, not a new identity provider. Internal and remote use the same Entra object id on the same plane. Remote is not a second control plane and not a VPN SKU. Microsoft Conditional Access may identify the human. It does not admit the write. The Cloud Agent may operate the host. It is not a seat.

The executive dashboard is that same plane, tiled. Real-time here means the admit ledger and the freeze state: pending binds, admits, refuses, frozen, last sealed keep. It does not invent a live P&L, forecast ARR, or Production Business Central metrics. Until signed L1, business tiles stay zero and the sandbox journal AINAV-L1 is labeled lab operator identities. AI compliance tiles map NIST, SOX, EU AI Act, ISO 42001, books-and-records, and three lines of defense with claimed=false. The dashboard is not a certificate and not a SKU. The client executive dashboard is included with L1. It is not an upsell. There is one dashboard. Do not sell Standard Dashboard versus Advanced Dashboard. Advanced provision adds priced desks, P-ADM keep, paid U-DUAL, and hours ? not a second dashboard SKU.

The floor is a command console on one plane. Hierarchical views are not a second product. Owner and board get freeze and the off switch. They are not seats. Seat A and seat B get the walkable rehearsal and refuse. The examiner gets the bind inspector, the first record, the second record, and the maps. Remote is the same Entra object id ? Conditional Access may identify; it does not admit. IT hosts Copilot and agents and can demonstrate that PIM, Teams, Copilot, and Agent Tools are not dual admit.

Investor packet

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

The write path is the same for every privileged class: draft, bind an action_hash, seat A, seat B, first record on the SoR, second record as the sealed DecisionRecord, keep. The floor walks that path as a sandbox rehearsal of the public wedge bc.general_journal.post. Completing the rehearsal does not create a new SoR write. Microsoft is not called. Production stays 0. Second record stays 0. Keep stays none. Same-seat, agent-click, PIM, Copilot, and replay are deny paths. Freeze in the console is local to the browser. The catalog plane stays OPEN until an owner later marks a real freeze.

The duty matrix is who may admit, freeze, keep, draft, host, or counsel. Only seat A and seat B admit. The attention board is pending 0, refused 0, frozen 0, production writes 0, second record 0, standing grants 0, provisioned SKUs 0/0/0, and one sandbox first record. The clock is catalog as-of. It is not a live Production clock. Off switch is fail-closed. Reset is the last sealed keep. Rollback is a compensating write that itself requires dual admit. Coverage is every action class on L1, P-ADM, and U-DUAL. None of those classes are live. Three lines of defense: 1LOD is dual admit, 2LOD is P-ADM keep, 3LOD is not claimed.

Access authorization is zero-standing, not a ZTNA SKU. Microsoft Entra and Conditional Access may identify the human on every request. Identify is not admit. Network location, VPN, PIM, and a Teams presence are not trust. A view authorization lets a human see a console. A seat authorization lets a human bind. A grant is a single-use consume of one action_hash. Revocation is freeze, seat revoke, grant expire, SKU detach, or view revoke. There is no standing privilege on the write.

Provisioning is two bands on the same plane, not two more SKUs. Standard provision is included seating with L1: the included L1 packs, lib.l1.wedge on bc.sandbox, Entra identity, Teams notify, the twin, proof day or Acceptance Kit, and the client executive dashboard. Standard is not an upsell product. Advanced provision is the upsell band: priced L1 desks, priced P-ADM keeps, paid U-DUAL, priced U-DUAL desks, and fee-for-service hours after L1. Advanced is not a SKU. U-DUAL is never free with P-ADM. Hours never attach U-DUAL. Attached today is 0 L1 / 0 P-ADM / 0 U-DUAL. Provisioning a SKU is not LIVE_PIN_OK.

Inter-communication is notify. Teams Enterprise, Teams Premium, and mail may tell a human that a bind is waiting or a keep landed. A chat is not a seat. A mailbox is not the second record. Graph is not called from this floor. The keep is the sealed DecisionRecord, not the thread.

Record keeping is two records and a keep. First record is the admitted SoR write. Second record is the sealed DecisionRecord after P-ADM. Keep is the weekly export after kit PASS. Retention is mapped to books-and-records and COSO. It is not a 17a-4 opinion and not a certificate. AI compliance and regulation compliance are the same maps with claimed=false.

WHO BUYS • WHY NOW

A controller already on Dynamics 365 Business Central Premium, Microsoft Entra ID, and two-person journal SOD, whose firm utilizes AI and whose customers do too. No named buyer is invented in this packet.

Every new client AI is another unauthorized-write surface. The buyer is the controller who already has Business Central Premium, Entra, and two-person journal SOD. They institute AINav on the org chart they already have. They do not replace their ERP. They do not replace Copilot. They put two humans in front of the write.

HOW A SALE WORKS

Qualify a controller who already has Business Central Premium, Entra, and two-person journal SOD. Hand them a proof-day brief they can forward. Ninety minutes on the twin. Sell L1 that week. Kit PASS. Attach P-ADM. Offer paid U-DUAL. Seat priced desks on the same plane. Honest exits are LOST, KIT_FAIL, and CHURN. No invented inbox. No invented design-partner name.

Pricing

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

BUSINESS MODEL ? THREE SKUS ONLY

Prove with L1. Keep with P-ADM after kit PASS. Deepen with paid U-DUAL. Packs, hours, and Microsoft licenses are not SKUs. U-DUAL is never free. A desk attaches to one of those three SKUs; it does not become a fourth product.

Every dollar below is catalog list. Not booked. Not ARR. Not a forecast. There is no billing provider. Recognized revenue stays zero until a controller actually buys.

A controller buys one of the three SKUs, then attaches desks to that SKU. Included desks are seating, not a discount on a second control plane. Priced L1 desks are \$6,000-\$10,000. Priced P-ADM keep is \$5,000-\$8,000 after kit PASS. Priced U-DUAL desks are \$6,000-\$10,000 and never free. Fee-for-service is \$3,500/day after L1 and never attaches U-DUAL. Hours are not a SKU.

SKU	Role	Catalog list	Term
L1	prove	\$28,000-\$40,000	2-4 weeks
P-ADM	keep	\$40,000-\$60,000	annual
U-DUAL	deepen	\$20,000-\$35,000	annual

There is no priced round in this packet. There is no valuation. There is no forecast ARR. The honest investor unit is catalog list times zero booked times a two-human close.

UPSELL CATALOG ? NOT A FOURTH SKU

Desks, libraries, and fee-for-service hours deepen the same three SKUs. They are not a fourth product. U-DUAL is never free with P-ADM. Hours never attach U-DUAL. Included packs are seating, not a discount on a second control plane.

L1 DESKS

Desk	List	What it is
Treasury wedge	included with L1	Standard L1 industry shape.
Controller desk	included with L1	Same L1 wedge, controller seating.

IF-THEN CATALOG LIST ? NOT A FORECAST

These rows are attach math on list prices. They are not bookings and not a forecast.

Scenario	List
One controller ? L1 only	\$28,000?\$40,000
One controller ? L1 then P-ADM	\$68,000?\$100,000
One controller ? all three SKUs	\$88,000?\$135,000
Three controllers ? L1 + P-ADM each	\$204,000?\$300,000
One L1 plus four FFS days	\$42,000?\$54,000
One L1 plus counterparty AI desk	\$34,000?\$50,000
One controller ? L1, P-ADM, second-record ke	\$73,000?\$108,000
One L1 plus off-switch desk	\$34,000?\$50,000
One controller ? L1, P-ADM, board keep	\$73,000?\$108,000
One controller ? L1, P-ADM, internal-audit k	\$73,000?\$108,000
One controller ? L1, P-ADM, IP keep	\$73,000?\$108,000
One L1 plus payables and bank desks	\$40,000?\$60,000
One controller ? L1, P-ADM, oversight keep	\$73,000?\$108,000
All three SKUs plus invoice and credit desks	\$100,000?\$155,000

INSULATION

The vendor of the AI cannot credibly sit over that AI as the failsafe. Lockfile stays job_c. Gold is fail-closed. Catalog law refuses competitor SKUs. This is not a patent. This is not uncopiable. G12 stays open.

TRACTION ? HONEST

The admit plane is in code. Gold floor is 95 percent. Gold floor 99 is now the floor after measured coverage. Live Cloudflare quality probe verified 301, apex 404 empty on Cloudflare edge, TLS 1.2+, and mail not Cloudflare anycast. Azure SWA is the development twin and the 2.82.0 review website. Owner recorded Automatic SSL/TLS Full (strict). Rocket Loader stays owner confirm. The Floor sits catalog view_shows, the provision spine, and the owner board packet. There is a real Business Central Sandbox company named AINav and a sandbox journal AINAV-L1. Those seats were lab operator identities, not two named treasury humans. The Institute twin is hosted on Azure and is not launched. Production is blocked. Named customers: none. Recognized revenue: none. Signed L1: none.

Close

30 August 2026 • Confidential • From James Hodnett • Release 2.95.0

THE ASK

Cynthia, you agreed to be seat B and the Inception business executive. Mailbox chodnett@ainav.institute is recorded. Your own Entra object id and your own click are still open. Not stock. Not Global Admin. Not a priced round. Not LIVE_PIN_OK.

I will not ask you for stock, Global Admin, a priced round, a valuation, or to mark LIVE_PIN_OK. I will not invent an email, an officer title, or a second unique human in the catalog. You are not a rubber stamp. The Cloud Agent is not your stand-in.

HIGHLIGHTS

? Three SKUs only. Year-one catalog list if one controller buys all three: \$88,000?\$135,000. Not booked.

? L1 \$28,000?\$40,000 in two to four weeks. Ninety-minute proof day on the twin.

? P-ADM \$40,000?\$60,000 / year after kit PASS. U-DUAL \$20,000?\$35,000 / year, never free.

? Priced L1 desks \$6,000?\$10,000. Priced P-ADM keep \$5,000?\$8,000. Priced U-DUAL desks \$6,000?\$10,000.

? Fee-for-service \$3,500/day on the same plane after L1. Hours are not a SKU and never attach U-DUAL.

? Independence from Microsoft, Copilot, Agentforce, Joule, and Now Assist. Not a patent. Not uncopyable.

? Ultimate control plane: last human gate over every drafting AI. Vendor-native HITL is not dual admit. Not a patent. Not uncopyable.

? Executive dashboard tiles the admit ledger and freeze state. Humans from the owner down. Remote is the same Entra plane. Compliance maps claimed=false.

THIS PACKET REFUSES

priced round • invented valuation • forecast ARR • named customer • LIVE_PIN_OK • equity grant • uncopyable • patent granted

Letter packet for the agreed second human. Mailbox recorded. Full upsell catalog and list prices. Not a raise. Not a forecast. Not a contract. Not LIVE_PIN_OK.

James Hodnett, sole owner of AINav, Inc.
